

# **Detecting pathogens in food**

## **Related titles from Woodhead's food science, technology and nutrition list:**

*Microbiological risk assessment in food processing* (ISBN: 1 85573 585 7)

Microbiological risk assessment is one of the most important recent developments in improving food safety management. Edited by two leading authorities in the field, and with a distinguished international team of experts, this book reviews the key stages and issues in MRA.

*Foodborne pathogens* (ISBN: 1 85573 454 0)

As trends in foodborne disease continue to rise, the effective identification and control of pathogens becomes ever more important for the food industry. With its distinguished international team of contributors, *Foodborne pathogens* provides an authoritative and practical guide to effective control measures and how they can be applied in practice to individual pathogens.

*Hygiene in food processing* (ISBN: 1 85573 466 4)

Drawing on the expertise of the prestigious European Hygiene Equipment Design Group (EHEDG) and other experts in the field, this major new collection promises to be the standard work on good hygiene practice in food processing. The coverage is truly comprehensive and includes hygiene regulation and legislation for both Europe and the USA. It opens with an examination of the general principles of hygiene, moves on to cover plant design and construction as well as hygiene management principles and methods. It will be an invaluable guide for all food processors.

# Contents

*Contributor contact details*

Introduction

*T. McMeekin, University of Tasmania*

## **Part I General issues**

### **1 Microbiological analysis and food safety management: GMP and HACCP systems**

*C. de W. Blackburn, Unilever R&D Colworth, UK*

- 1.1 Introduction
- 1.2 Food safety management systems
- 1.3 Types of testing used in GMP and HACCP systems
- 1.4 Microbiological analysis and GMP systems
- 1.5 Microbiological analysis and HACCP systems
- 1.6 Future trends
- 1.7 Sources of further information and advice
- 1.8 References

### **2 Sampling techniques**

*D. Legan and M. H. Vandeven, Kraft Foods North America, USA*

- 2.1 Introduction: common definitions
- 2.2 The purpose of sampling
- 2.3 Sampling and the problem of pathogen distribution
- 2.4 Acceptance sampling when the history of the material is not known

- 2.5 Acceptance sampling when the history of the material is known
- 2.6 Environmental sampling and tightened inspection/skip lot sampling
- 2.7 Taking samples
- 2.8 Maximizing the value of test results
- 2.9 Future trends
- 2.10 Sources of further information and advice
- 2.11 Acknowledgements
- 2.12 References

### **3 Separation and concentration of samples**

*A. Sharpe, Filtaflex Limited, Canada*

- 3.1 Introduction: the need for separation and concentration
- 3.2 General approaches to removal, separation and detection
- 3.3 'Primary' microbial removal methods
- 3.4 Separation and concentration of cells once they have been removed
- 3.5 Future trends
- 3.6 References

### **4 Validating detection techniques**

*J. Debevere and M. Uyttendaele, University of Ghent, Belgium*

- 4.1 Introduction
- 4.2 Definition of performance characteristics
- 4.3 Validation protocols
- 4.4 The application of validation schemes: immunological methods
- 4.5 The application of validation schemes: molecular methods
- 4.6 The use of validated methods in accredited laboratories
- 4.7 Future trends
- 4.8 Sources of further information and advice
- 4.9 References

### **5 Quality assurance of laboratory performance**

*R. Wood, Food Standards Agency, UK and J. E. L. Corry, University of Bristol, UK*

- 5.1 Introduction
- 5.2 Legislation and codes of practice
- 5.3 Legislation in the EU
- 5.4 The Codex Alimentarius Commission
- 5.5 The UK Food Standards Agency
- 5.6 Quality assurance requirements: accreditation
- 5.7 Internal quality control (IQC)
- 5.8 Proficiency testing

- 5.9 Quality assurance requirements: analytical methods
- 5.10 Criteria for valid methods of analysis
- 5.11 Method validation through proficiency testing
- 5.12 Measurement uncertainty for the microbiologist
- 5.13 Future trends
- 5.14 References
- 5.15 Appendix: The ISO/IUPAC/AOAC International Harmonised Protocol for Proficiency Testing of Analytical Laboratories

## **Part II Particular techniques**

### **6 Culture methods**

*P. Stephens, Oxoid Ltd, UK*

- 6.1 Introduction
- 6.2 Culture medium design
- 6.3 Culture method design
- 6.4 Examples of qualitative methods
- 6.5 Examples of commercial kits
- 6.6 Future trends
- 6.7 Further reading
- 6.8 References

### **7 Electrical methods**

*D. M. Gibson, BIODON International, UK*

- 7.1 Introduction: principles
- 7.2 Instruments
- 7.3 Data presentation
- 7.4 Pathogen assays: introduction
- 7.5 Assays for *Salmonella*
- 7.6 Assays for *Enterobacteriaceae*, *Escherichia coli* and coliforms
- 7.7 Assays for other pathogens
- 7.8 Accreditation of electrical methods
- 7.9 Conclusion and future trends
- 7.10 References

### **8 ATP bioluminescence**

*M. Griffiths and L. Brovko, Canadian Research Institute for Food Safety*

- 8.1 Introduction
- 8.2 Principles of ATP bioluminescent assay
- 8.3 Assay for testing the total bacterial count of food products
- 8.4 The use of assays for particular foods
- 8.5 The use of assays for hygiene monitoring

- 8.6 The use of assays to detect particular pathogens
- 8.7 Instrumentation
- 8.8 References

## **9 Microscopy techniques: DEFT and flow cytometry**

*R. Raybourne and M. Tortorello, US Food and Drug Administration*

- 9.1 Introduction
- 9.2 Stains, fluorochromes and probes
- 9.3 Microscopy
- 9.4 The direct epifluorescent filter technique (DEFT)
- 9.5 Flow cytometry
- 9.6 Comparing detection techniques and future trends
- 9.7 Sources of further information and advice
- 9.8 References

## **10 Immunological techniques: immunochromatography, enzyme linked immunofluorescent assays and agglutination techniques**

*C. L. Baylis, Campden and Chorleywood Food Research Association, UK*

- 10.1 Introduction
- 10.2 Immunochromatography: lateral flow devices
- 10.3 Enzyme linked fluorescent assays (ELFA)
- 10.4 Agglutination tests
- 10.5 Future trends
- 10.6 Sources of further information and advice
- 10.7 References

## **11 Immunological techniques: ELISA**

*J. McCarthy, Unilever R&D Colworth, UK*

- 11.1 Introduction
  - 11.2 The basic principles of an ELISA
  - 11.3 ELISA formats
  - 11.4 Commercially-available ELISAs
  - 11.5 Advantages and disadvantages in using ELISAs
  - 11.6 Future trends
  - 11.7 References and further reading
- Appendix Manufacturers of ELISA kits

## **12 Genetic techniques: PCR, NASBA, hybridisation and microarrays**

*K. Sanderson and D. Nichols, University of Tasmania, Australia*

- 12.1 Introduction: the polymerase chain reaction (PCR)
- 12.2 Nucleic acid sequence-based amplification (NASBA), hybridisation and microarrays
- 12.3 Key principles

- 12.4 Applications for particular pathogens and foods
- 12.5 Advantages and disadvantages
- 12.6 Examples of commercial kits
- 12.7 Future trends
- 12.8 References

### **13 Genetic techniques: molecular subtyping methods**

*C. Fitzgerald and B. Swaminathan, Centers for Disease Control and Prevention, USA and A. Sails, Newcastle General Hospital, UK*

- 13.1 Introduction
- 13.2 Approaches to molecular subtyping
- 13.3 PCR-based techniques
- 13.4 AFLP analysis and emerging methods
- 13.5 Standardized molecular subtyping of pathogens
- 13.6 Interpreting molecular subtyping data
- 13.7 The future of molecular subtyping
- 13.8 Sources of further information and advice
- 13.9 References

### **14 New biosensors for microbiological analysis of food**

*G. Volpe and G. Palleschi, University of Rome, Italy and A. Turner, Cranfield University, UK*

- 14.1 Introduction
- 14.2 Transducers used in biosensors and immunosensors
- 14.3 Biosensors used to detect *Salmonella*
- 14.4 Biosensors used to detect *Staphylococcus aureus*
- 14.5 Biosensors used to detect *Escherichia coli*
- 14.6 Biosensors used to detect algal toxins and aflatoxin
- 14.7 DNA biosensors
- 14.8 Detecting microbial spoilage
- 14.9 Future trends
- 14.10 References

### **15 The use of applied systematics to identify foodborne pathogens**

*M. Uyttendaele and J. Debevere, Ghent University, Belgium*

- 15.1 Introduction
- 15.2 Identification based on morphological, physiological and biochemical characteristics
- 15.3 Identification based on chemotaxonomy
- 15.4 Identification based on genetic information
- 15.5 Applications: identifying the genus *Aeromonas*
- 15.6 Applications: identifying the genus *Bacillus*
- 15.7 Applications: identifying the genus *Campylobacter*
- 15.8 Detecting virulence factors in foodborne pathogenic bacteria
- 15.9 Future trends

- 15.10 Sources of further information and advice
- 15.11 Acknowledgements
- 15.12 References
